WATER FINDER PASTE

To determine the presence of water in diesel and light mineral oils.

WATER FINDER PASTE is a product that shows the presence of water in the gasoline and diesel, simply changing the color clearly in contact with it.

APPLICATION

WATER FINDER PASTE is an indispensable aid for the measurement and quantity of water that can be present in the tanks.

Because water causes corrosion of storage tanks, which can be used, for example, for heating systems.

Water can also form by condensation

INSTRUCTIONS FOR USE

Put the paste on the end of a dip stick and let it touch the bottom of the tank, immediately pulling out the dip stick water presence can be read by a sharp red color.
